

Java

```
class Solution {  
    public int largestCombination(int[] candidates) {  
  
    }  
}
```

JavaScript

```
/**  
 * @param {number[]} candidates  
 * @return {number}  
 */  
var largestCombination = function(candidates) {  
  
};
```

TypeScript

```
function largestCombination(candidates: number[]): number {  
  
};
```

C++

```
class Solution {  
public:
```

```
    int largestCombination(vector<int>& candidates) {  
    }  
};  
-----
```

C#

```
public class Solution {  
    public int LargestCombination(int[] candidates) {  
    }  
}
```

Kotlin

```
class Solution {  
    fun largestCombination(candidates: IntArray): Int {  
    }  
}
```

Go

```
func largestCombination(candidates []int) int {  
}
```
